I tested the web page in Chrome, Microsoft Edge, and Firefox. I used validator.w3.org to validate the html. I used Visual Studio Code as a text editor.

Bootstrap seems easy to use. You have a predefined list of classes and you attach those to the elements you want to have those associated CSS properties. I found it a little difficult to find out what specific classes do but I probably haven't found the right documentation.

The assignment was made relatively easy by asking us to start with a template. I am just not familiar enough with bootstrap to make it behave how I want yet.
